

Instruction Sheet For Part #2380

Pro-Lite Worksavers Evo Pushrods Use on Big Twins 1984-Present

Pushrods have 24 threads per inch, with 3/8" balls on both ends.

JIMS® Adjustable Pushrods, for Big Twins, are strong, light and made from aerospace quality heat treated aluminum, with heat treated steel ends. No disassembly of the top end, or removal of the cam, is required. These are the lightest pushrods on the market today, weighing in at about .73 grams. Note: All of JIMS® pushrods eliminate the need to disassemble the top end or remove the rocker arms to change tappets, tappet blocks, pushrod covers seals, and cams.

1. Refer to H.D.® Service Manual for specifications.
2. These pushrods were designed and engineered for use with JIMS® "Power Glide™" tappets or stock replacement tappets.
3. If you are using these pushrods with JIMS® tappets #2456-1, follow the adjustment instructions using 24 threads per inch adjustment.
 Note: This adjustment will make the pushrods tight, which will bleed the hydraulic lifter. It can take five to fifteen minutes (or longer) to bleed off. It is very important that the engine is not rotated while pushrods are tight. The pushrod will slip with your fingers after the tappet has bled off.
4. Recheck the lock nut, close covers and install clips.
5. Repeat exact procedure on rear set.
6. Turn motor over several times to pump oil into the "Power Glide™" tappets, until the oil light goes out or until oil is returning to the oil tank.
